2. Claims 1-31 are rejected under 35 U.S.C. § 102(e) as being anticipated by Zimmermann ('667).

Zimmermann discloses a signal processor for converting digital images for use in an imaging system (Fig. 1), having:

- digital data memory means (4) for storing digital data representing an image having the properties of a circular field-of-view and objects in the field being substantially in focus (see, col. 5, lines 13-17) ;
- a control input means (5) for receiving a signal representing a selection of a portion of the image; and
- a converter means (6 and 7), responsive to the control input, for converting stored digital data in the digital data memory representing the selected portion into digital data representing a planar image for
